Box No. II	Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)				
This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:					
1.	Claims Nos.:				
L	because they relate to subject matter not required to be searched by this Authority, namely:				
2.	Claims Nos.:				
	because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:				
•					
3.	Claims Nos.:				
	because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a)				
Box No. III	Observations where unity of invention is lacking (Continuation of item 3 of first sheet)				
This Interna	tional Searching Authority found multiple inventions in this international application, as follows:				
	extra sheet				
	As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.				
	As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.				
3.	As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:				
4. X	No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:				
	1-57				
	·				
Remark on	Protest The additional search fees were accompanied by the applicant's protest.				
	No protest accompanied the payment of additional search fees.

Continuation of Box No: III

The international application does not comply with the requirements of unity of invention because it does not relate to one invention or to a group of inventions so linked as to form a single general inventive concept. In coming to this conclusion the International Searching Authority has found that there are different inventions as follows:

- 1. Claims 1-57 are directed to a method/system for controlling the pitch of a controllable pitch marine propeller comprising providing a cruise mode wherein the engine speed is adjustable up to a maximum engine speed and a manoeuvring mode in which the pitch is adjusted whilst maintaining engine speed within a predetermined limit les than the maximum engine speed. It is considered that providing said two distinctive modes of operation comprises a first "special technical feature".
- 2. Claims 58-72 are directed to a method/system for controlling the pitch of a controllable pitch marine propeller comprising a power stop mode and adjusting the pitch of the propeller into a full reverse position with engine power being available throughout the transition from advancing movement of a watercraft to a reduced forward speed of the watercraft. It is considered that the underlined features comprises a second "special technical feature".
- 3. Claims 73-87are directed to a method/system for controlling the pitch of a controllable pitch marine propeller wherein the speed of the watercraft is used to control engine power dependent on the parameters selected from the following: propeller pitch and operating mode of the watercraft. It is considered that the underlined features comprises a third "special technical feature".

Since the abovementioned groups of claims do not share any of the technical features identified, a "technical relationship" between the inventions, as defined in PCT rule 13.2 does not exist. Accordingly the international application does not relate to one invention or to a single inventive concept, a priori.

International application No.

Information on patent family members

PCT/AU2004/001204

This Annex lists the known "A" publication level patent family members relating to the patent documents cited in the above-mentioned international search report. The Australian Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
